

SmartLink® Patient Therapy Management System

The smart way to link to a patient's CPAP therapy

SmartLink PC Software provides an integrated solution for managing your CPAP patients and compliance information, while helping to improve workplace efficiency.

SmartLink can help you generate an adherent patient quickly. It helps you provide earlier intervention for those who may need additional instruction or extra attention. And once a patient is compliant, the SmartLink module can be transferred to another client, spreading the module cost across multiple patients.

SmartLink delivers innovations you can use to quickly search your patients' data, organize your work, and better share the information with physicians – all from one place.

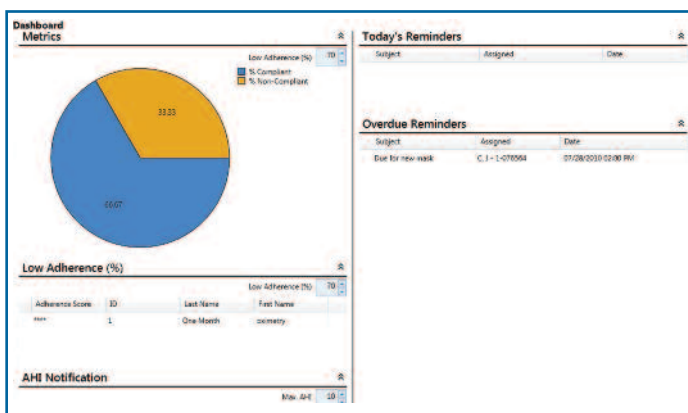

SmartLink Module, Data Card,
Card Reader and software
(Model DV5M-SS-2)

Performance Features

SmartLink's intuitive user platform provides a powerful patient management tool, featuring:

- **SmartLink Dashboard** – a collection of customizable widgets to quickly identify important tasks, information and patients that need closer attention;
- **Advanced Find** provides power search function to locate patients, doctors, payors and devices in the system, and users can save frequently used search queries;
- **Specialized Reporting**
 - > **Customizable Reports** – Report templates can be created and saved for reports viewed exactly as you want them, in the order you want them;
 - > **Built-in SmartCode Reports** – SmartCode reports, a DeVilbiss exclusive, are now part of the SmartLink software. SmartCode compliance data is downloaded in the SD card with SmartLink and Oximetry data, and can even be viewed over time for people who need more than 90 days to ensure compliance;
 - > **Oximetry Reporting** – Detailed oximetry reports included with the patient report section. When using the optional Nonin oximeter, scoring of desaturations and heart rate is now part of the patient record.

Other Features Include:

- **Reminders** – Set reminders in calendar view for patient call reminders to schedule an appointment, send documents to the physician, perform annual equipment maintenance and more!
- **Software Remote** – included with SmartLink install, gives access to all CPAP settings, shows detailed information, and real-time traces. Use with optical isolator and extension cable to control the CPAP during a titration.
- **Attach documents** in any format to the patient record
- **SmartLink Toolbar** – left-hand pane lists groups of data so you can quickly and easily find the information you need.
- **Security** – allows administration of users to restrict access, based on Windows® login, so set up is quick and easy.
- **E-mail reports** in one of 8 document formats, right from the report view, can save to the hard drive, too.
